**GOVERNMENT APPROVAL DOCUMENTS SUBMITTED - TUCANO**

Beadell Resources Limited (**Beadell**) is pleased to announce that submissions for approval of the new mine plan to recommence mining at the Tucano gold project in Brazil have been made to the Brazilian Ministry of Mines and Energy (**DNPM**) and the Environmental Department Agencies (**SEMA/IMAP**).

The DNPM submission is a result of additional mineral inventory and a change of processing methodology and as such only a variation is required to the original Feasibility Study submitted in 2000. The document outlines the expansion of the open pits and waste dumps as well as the inclusion of a new CIL (carbon in leach) processing plant and related in-pit tailings disposal. All other aspects of the original document remain intact including strong stakeholder support and involvement.

Simultaneously, a document has been submitted to SEMA/IMAP which also contains a variation to the original Environmental Impact Statement (**EIS**) covering the anticipated new mining parameters and all associated environmental issues.

As these submissions are simply outlining variations to the existing license to operate, no approvals beyond the DNPM and SEMA/IMAP are required.

Managing Director Peter Bowler said "We are particularly pleased to submit these documents to the DNPM and SEMA/IMAP and look forward to working closely with these departments for the mutual benefit of all stakeholders involved with the exciting and growing Tucano gold project. This is an important milestone as we progress towards the resumption of large scale gold mining. To submit these documents only four months after acquiring Tucano, on time and within budget, is a credit to the people involved and indicative of the quality team we have working on all aspects of the Definitive Feasibility Study."
